

Folding the 3-piece Labyrinth

1. Using the labyrinth broom provided, clean the entire exposed (walking) surface of the labyrinth.
2. Separate the side sections from the center, lifting and separating the Velcro and moving the edges apart so the Velcro doesn't inadvertently reattach.
3. Fold one side section in half from top to bottom matching the Velcro edge. Sweep newly exposed underside to remove debris and press out air.
4. Fold in half lengthwise so the shorter edge covers the Velcro edge. Sweep, and repeat two more times until you have one long strip.
5. Beginning at the end opposite the entrance edge, fold over about 12 inches and repeat, gently folding the canvas, sweeping as needed to remove debris. Fold as tightly as possible. Place the large roll into one end of the storage container.
6. Repeat steps 3, 4 and 5 with the other side section.
7. To fold the center section, place 3-4 persons in stocking feet, standing on the labyrinth along one Velcro edge, facing out. Bend over and grasp the edge and walk backward, pulling the edge toward the center using a "low and slow" movement. In doing this you pull the labyrinth close to the ground and it will roll as it folds over. Stop when the edge is about 1 inch from the center.
8. Repeat Step 7 on the other side. Now the center section is one-half its full width. Using the broom, clean the newly exposed underside of the canvas. If you have a sufficient number of helpers, someone can sweep the first underside while the second side is being folded in. Always sweep debris off from the canvas. This also pushes out captured air and wrinkles.
9. Using the same method as before, space people along the new folded outside edge and carefully fold each side in half again – maintaining the approximate 1-2 inches of uncovered space along the center. The center section is now one-fourth the original width. Sweep the exposed underside as needed to clean and push air and wrinkles.
10. Fold one side completely over the other so you have one long piece folded lengthwise. Straighten, stretch and sweep as needed.
11. Beginning at the end opposite the entrance, fold the center in half toward the entrance. Repeat 3 times, sweeping debris as needed. Place into the storage container on top of the side sections.
